

## Assessment Module 3

The assessment of the learning outcomes will be a post-module assessment. Based on the following questions and assignments, which are directed towards the module-based acquisition of competences, the participants analyse two crises cases from their own work (one case involving an individual and one case involving a group):

- In the two specific cases, what network partners are particularly important?
- Develop a concrete action plan as a requirement for you and/or the team so that the care crisis you described can be accompanied towards a positive change (and will not further aggravate).
- Based on the experiences in the two (or other) cases, what regional cooperation networks should be utilised by you in the future? (If there are no relevant ones: What would you like to suggest to your supervisor or cooperation partners?)
- What could/should a cooperation agreement of your facility with another facility/level of responsibility/discipline (or several ones) include in one of the two cases?
- Should there be a general cooperation agreement with another facility/level of responsibility/discipline (or several ones)? Or should participation in existing networks or the creation of a new network be promoted? If no, why not? If yes: With whom? And what aspects should be included? Who are the responsible persons?
